

Waste Disposal Cost Savings & Revenue Opportunities

Waste Coordinator is an Uber-like SaaS platform for oilfield waste disposal. We connect waste disposal loads with compatible waste disposal facilities and determine the cheapest full cost option on every load.

We don't just connect waste loads to commercial facilities, we include participating producers who have excess proprietary waste disposal capacity.

As part of our digital ledger, we include CO₂ emissions and digital manifests on every load.

More Options + Advanced Technology = More Savings + New Revenues

Do I have inefficiencies?

- Is every decision made with up-to-date wait time and capacity data?
- How many disposal facility options do I assess for each decision?
- How much did I spend on wait times last year?
- Do truckers sometimes make our disposal decisions?
- Do I assume that internal waste disposal facilities are always the cheapest option?
- Are my volume-based contracts negotiated for convenience, or cost?
- How much are local "relationships" costing?
- What are the CO₂ emissions of waste disposal transportation?
- Do I have a digital record and manifest of every load?
- Can I automate invoice approvals with the data I have?

Galatea Technologies sees a future in which waste disposal decisions are automated and optimized allowing producers to focus on finding and developing world leading energy assets.

"People follow a process, using data, enabled by technology, to achieve a goal."

Send us your people... we have everything else covered.

WASTE COORDINATOR

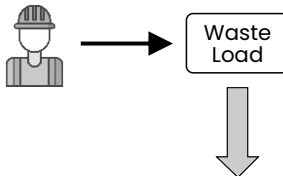

Disposing of Inefficiencies

Waste Coordinator Workflow

Benefits

1

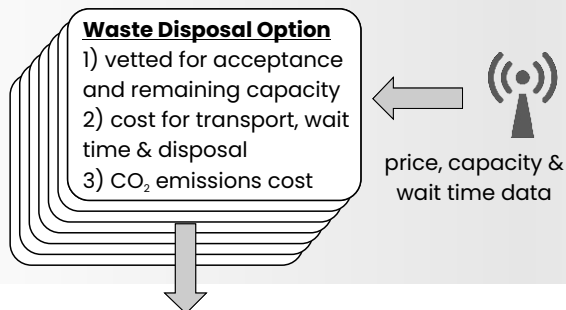

Waste Load Created

2

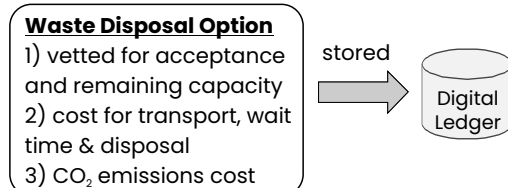

Disposal Facility Options Vetted & Assessed

(Commercial + Producer-Owned + Internal)

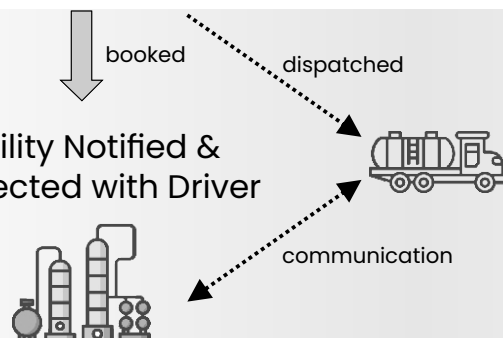

3

Optimal Decision Selected & Booked

4

Facility Notified & Connected with Driver

- SaaS with no setup fee, usage-based pricing models and high ROI
- scalable... use it for an operating area or your entire company
- simple user interface
- uses up-to-date disposal facility capacity and wait time data to inform optimal decisions
- state-of-the-art routing algorithms ensure accurate estimates and optimal routes while considering road bans and use-agreements
- connects every waste disposal load with the cheapest full-cost option
- digital record of every load includes cost estimates, CO₂ emissions and digital manifests
- automate invoice approvals
- connect through our API to fuel internal processes
- booking a load with "hold my place in line" and "estimated arrival" reduces wait time costs
- waste facilities are connected to waste load revenue in a platform that lets you manage all your disposal activities
- easily integrated with complementary automation technologies
